Canadian Experience Training

For Internationally Trained Engineering Graduates

YOU ARE

An internationally trained highly qualified individual who has several years of international experience, but cannot find your desired engineering job, or get an interview because of lack of Canadian experience.

Since 2002, our team has trained and mentored internationally-educated engineers to adapt to the engineering profession in Canada and have assisted several candidates with actual on-the-job experience to complete the requirements for P. Eng. qualification and to secure permanent engineering jobs. Our principal instructors each have 20 to 50 years Canadian professional engineering experience and have designed and managed numerous projects across Canada in the public and private sectors.

In this intensive program we will give you the edge through interaction with leaders in Canadian experience, knowledge, strategies and tactics. You will learn how the Canadian engineering profession and the related laws, codes and standards have evolved and how to effectively execute engineering design and construction. You will also receive training on project articulation and technical presentation skills to help you communicate your work and ideas.

A limited number of qualified candidates may also be able to enroll in actual on-the-job Canadian experience training program, ranging from 8 to 16 weeks, in a consulting engineering firm.

Qualifications

Masters Level Engineering Degree or over 10 years Engineering experience

Meet your Instructors

R. Anthony Warner, B.Sc., MBA, P.Eng., Consulting Engineer, FEC

Internationally Acclaimed Canadian Entrepreneur with over 25 years of engineering experience in Canada and the USA. Anthony started his own consulting engineering firm VIRTUAL Engineers in 1997 and has completed over 1500 projects in Canada and internationally spanning the industrial, commercial and municipal sectors. A former councillor for PEO, he is a Fellow of Engineers Canada, a member of the Fellow Organization of American States, PEO, CEO, ACEC, APEGS, Canadian Finance & Marketing and has won numerous awards, including; Profit100 Next 100, Quebec Government Award.

Anthony has trained and mentored engineers, innovators, and business professionals throughout his career and was a mentor in the world's largest business mentorship event hosted in 2012 by Ontario Centres of Excellence .

R.W. Cumming, P.Eng.

With over 50 years of Canadian engineering design and construction experience, Bob is a well respected member of the engineering community in Ontario and other provinces. Bob designed many of the high-rise residential structures in downtown Toronto and is an expert at Canadian design standards and building codes. He has performed structural design, modification, investigation, and site supervision of concrete structures such as building foundations, slabs, underground structures, shear wall apartment buildings, water tanks, and bridges.

Bob has mentored engineers throughout his career and has provided Canadian experience training since 2002.
